Pre-handover QA report: JJ's ERP

JJ's deli shop local QA copy (production build) — target https://jjs.ahmad-zaven.io

fixes on top of commit e4c1e01 2026-11-06

Verdict: Ready — small issues left

0	0	3	1
Blocker	Major	Minor	Polish

All blockers and majors are fixed and re-tested on a fresh server: no double credit or double collection, Syrian-pound debts settle exactly, the live rate is in new pounds, and pounds products and suppliers save. Build, type check, all 9 API suites, the browser tour and the click-through flows pass. Two product questions stay open for the client (orders in fives, sample data).

What was tested

Roles: Admin (jabal) · Manager · Member · Portal client

Languages: Arabic · English

Devices: Desktop 1366px · Phone 390px

Areas: Sign in · Orders · Deliveries · Returns · Daily close · Clients · Purchasing · Money / exchange rate · Reports & CSV · Users & roles · Client portal · Security & hygiene

Notes: Tested on a throwaway copy (own data folder, production build) with the sample data and the same env-var logins as the Coolify deploy. Printers, barcode scanner, the real exchange-rate API (no key) and the live VPS were not tested. Some findings were found by reading the code and are marked as such in Cause.

Findings (19)

QA-001	BLOCKER	Return then cancel gives the client the money and the stock back twice	Fixed & verified
QA-002	BLOCKER	A delivery collects money the client already paid at the shop	Fixed & verified
QA-018	BLOCKER	A supplier or product in Syrian pounds could not be saved	Fixed & verified

QA-019	BLOCKER	The rate API answers in old pounds; prices are in new pounds	Fixed & verified
QA-003	MAJOR	Syrian-pound debt paid in exact pounds still shows a small dollar debt	Fixed & verified
QA-004	MAJOR	Paying a supplier the exact Syrian-pound amount can leave a balance or be refused	Fixed & verified
QA-005	MAJOR	Closing a past day counts cash from later days as "short"	Fixed & verified
QA-006	MAJOR	Returns give back the wrong amount when the invoice had free items	Fixed & verified
QA-007	MAJOR	Changing or resetting a staff password does not sign that person out	Fixed & verified
QA-008	MAJOR	Cancelling a delivered order after the cash was handed over puts the driver's box negative	Fixed & verified
QA-009	MINOR	Assets page goes blank on refresh or direct link	Fixed & verified
QA-010	MINOR	Custom roles can see costs through the day summary and CSV export	Fixed & verified
QA-011	MINOR	Server libraries with known security fixes available	Fixed — needs re-test
QA-012	MINOR	Login has no per-IP limit and the server sends no security headers	Fixed & verified
QA-013	MINOR	A product photo can be an SVG file that runs script	Fixed & verified
QA-014	MINOR	Sample data cannot be removed once loaded	Fixed — needs re-test
QA-015	MINOR	Orders "in fives" also applies to walk-in, staff and tasting — but not to accepted portal requests	Needs your decision
QA-016	POLISH	"1 orders not delivered yet" — plural on the close screen	Fixed & verified
QA-017	POLISH	CSV cells starting with = + - @ are not neutralised	Fixed — needs re-test

BLOCKER

QA-001 — Return then cancel gives the client the money and the stock back twice

Fixed & verified

Orders → Cancel / Distribution → Returns · admin, manager · en, ar · desktop, mobile · /orders

Steps to reproduce

1. Make an order of 5 items on credit for a client ($9.50)
2. Distribution → **Returns**: return all 5 against that invoice, settlement **credit**
3. Cancel the same order

Expected	Actual
The cancel is refused (or only cancels what was not returned). The client ends at $0.	Cancel is accepted. Client balance went 0 → −9.50 → 0 → **+9.50** (free credit). Stock is added back twice. With a **refund** return, the cash box pays out twice.

Likely cause: `server/services/orders.ts:456-470` (`cancelOrder`) does not look at returns already recorded on the order. Reproduced: `qa/flows/money-bugs.mjs` step #1.

Suggested fix: Refuse cancel when the order has returns (message: "This invoice has returns — cancel the returns first"), or cancel only the not-returned part.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: cancel after a return is refused (409 order_has_returns, Arabic + English message); client balance stays 0.

BLOCKER QA-002 — A delivery collects money the client already paid at the shop

Fixed & verified

Deliveries → collect money · admin, manager · en, ar · desktop, mobile · /deliveries

Steps to reproduce

1. Make a delivery order on credit ($12.50)
2. Client pays $12.50 on their account (client page → **Record payment**)
3. Open **Deliveries**: the order still says $12.50 to collect
4. Tick delivered → **paid all**

Expected	Actual
The delivery shows nothing left to collect, because the client's debt is already paid.	The driver is told to collect $12.50 again; after collecting, the client is at **+$12.50** credit and the box has the money twice. The daily-close "did not pay" list has the same blind spot.

Likely cause: `orderRemaining` (`server/services/orders.ts:361`) only uses the order's own `paidAmount` ; account payments (`server/routes/clients.ts:342`) are never linked to orders. Reproduced: `qa/flows/money-bugs.mjs` step #2.

Suggested fix: Cap what is left to collect by the client's real debt (never more than what they owe), or apply account payments to their oldest open invoices.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: after an account payment the Deliveries screen shows 0 to collect, the driver collects 0, balance stays 0. Same rule in the daily-close unpaid list. Invoice-tied payments now settle their own invoice first (`openClientCharges` , server/services/money.ts).

BLOCKER QA-018 — A supplier or product in Syrian pounds could not be saved

Fixed & verified

Purchasing → Suppliers / Menu → Products · admin · en, ar · desktop, mobile

Steps to reproduce

1. Add a supplier with currency SYP and no opening balance (or a product priced in SYP)
2. Save

Expected	Actual
It saves.	Refused with "Set the USD → SYP exchange rate first" — even when a rate was set. With prices in new pounds the menu could not be built.

Likely cause: `toUsd(0, "SYP", null)` threw: `server/routes/purchasing.ts:33` and `server/routes/menu.ts:197` passed no rate when the amount was 0.

Suggested fix: Converting 0 needs no rate (`server/lib/biz.ts`), and the supplier opening balance only asks for a rate when there is one.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: on a server with no rate at all, a SYP supplier and a SYP product both save (201).

BLOCKER QA-019 — The rate API answers in old pounds; prices are in new pounds

Fixed & verified

Settings → Currency & rate · admin · en, ar · desktop

Steps to reproduce

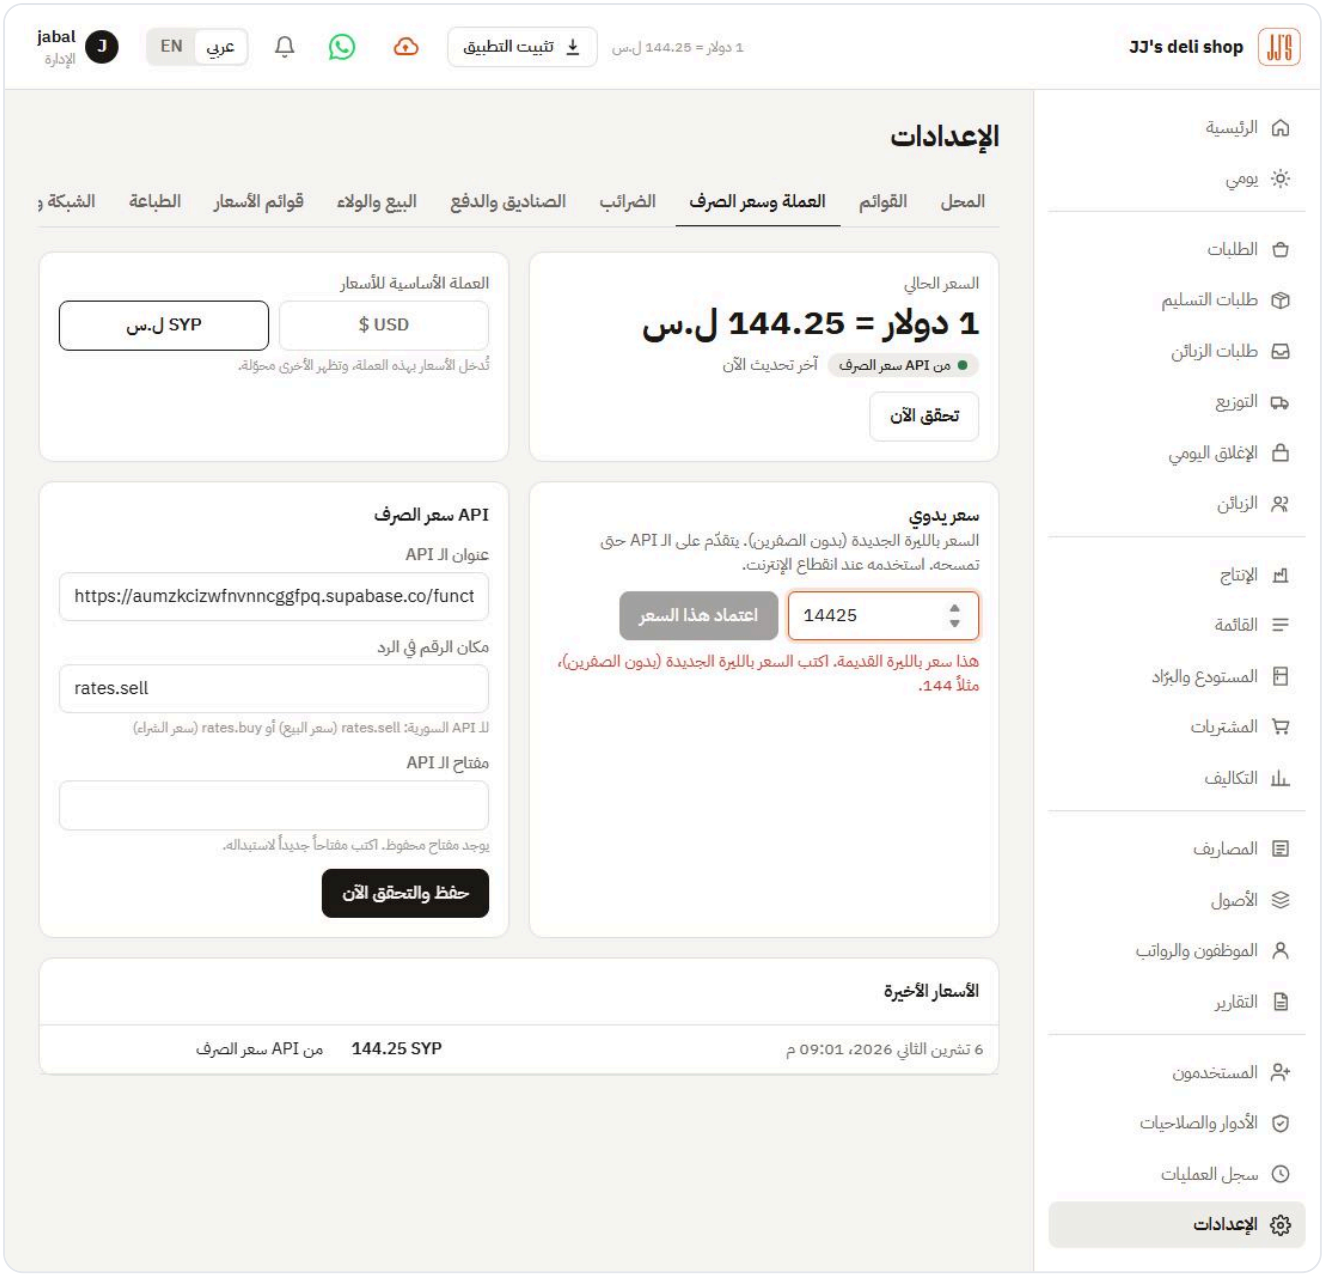

1. Connect the Syrian rate API
2. Sell a $3 item in SYP

Expected	Actual
About 433 new SYP.	The API gives 14,425 (old pounds); every SYP amount would have been 100× too big.

Likely cause: No handling of the 2026 redenomination (100 old = 1 new).

Suggested fix: Rates of 1,000 or more from the API are divided by 100 (`server/services/fx.ts`); the manual-rate box refuses old-pound numbers with a clear message.

Re-test: `qa/flows/fx-live.mjs` against the real API: 1 USD = 144.25 SYP; 5 × $3 salad = 2,165 SYP.

MAJOR

QA-003 — Syrian-pound debt paid in exact pounds still shows a small dollar debt

Fixed & verified

Deliveries / client balance (SYP) · admin, manager · en, ar · desktop, mobile · /deliveries

Steps to reproduce

1. Currency SYP, rate 13,000
2. Delivery order on credit: 146,250 SYP
3. Next rate 14,000
4. Deliver → **paid all** 146,250 SYP

Expected

The client owes 0.

Actual

Order says paid, but the client still owes **$0.80**; it shows in ageing, the money cloud and statements. The same happens for any SYP part payment when the rate moves.

Likely cause: Charge is valued at the order's rate, payment at today's rate (`server/services/orders.ts:348` vs `:413` , `:429`). Reproduced: `qa/flows/money-bugs.mjs` step #3.

Suggested fix: When a payment is in the same currency as the invoice, value it at the invoice's own rate (or keep SYP balances in SYP).

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: 1,950 SYP order at 130, rate moved to 140, paid 1,950 SYP → balance exactly 0.

MAJOR

QA-004 — Paying a supplier the exact Syrian-pound amount can leave a balance or be refused

Fixed & verified

Purchasing → pay supplier (SYP) · admin · en, ar · desktop · /purchasing/debts

Steps to reproduce

1. Supplier invoice 1,000,000 SYP at rate 13,000
2. Rate changes
3. Supplier → **Pay** 1,000,000 SYP

Expected	Actual
The invoice is fully paid, nothing left.	After a rate rise, part of the invoice stays due (536,924 SYP was left in our test across two invoices). After a rate fall the code would refuse it as overpaid.

Likely cause: Same cause as QA-003: `server/services/wholesale.ts:313-333` (`paySupplier`) converts at today's rate while the due amount uses the purchase-day rate. Partly reproduced: `qa/flows/supplier-syp.mjs` .

Suggested fix: Same fix as QA-003 (settle same-currency payments in that currency).

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: 10,000 SYP invoice paid with 10,000 SYP after the rate fell (130→120) and rose (140→150): accepted, nothing left due.

MAJOR QA-005 — Closing a past day counts cash from later days as "short"

Fixed & verified

Daily close · admin, manager · en, ar · desktop, mobile · /close

Steps to reproduce

1. Leave yesterday open
2. Sell $100 cash today
3. Go back to yesterday and close it, typing the amount the screen shows

Expected	Actual
Difference 0.	The $100 from today is recorded as a cash difference on yesterday (found in code, not run — needs two calendar days).

Likely cause: `server/routes/days.ts:170` uses the whole box balance as expected; the screen (`days.ts:70-71,100`) uses opening + that day's moves.

Suggested fix: Use the same formula on save as on screen (moves up to that date), or only allow closing days in order.

Re-test: `qa/flows/close-past-day.mjs` : a $100 cash move dated tomorrow, today closed with the screen's amount → recorded difference 0.

MAJOR

QA-006 — Returns give back the wrong amount when the invoice had free items

Fixed & verified

Distribution → Returns · admin, manager · en, ar · desktop · /distribution/returns

Steps to reproduce

1. Invoice with 5 free items (loyalty or subscription) + 5 paid items at $3
2. Return the 5 free items

Expected	Actual
Nothing is credited for free items; returning the paid ones credits $15.	Free items are credited ($3.75) and paid ones under-credited ($11.25), because every unit gets the same share of the discount (found in code).

Likely cause: `server/services/wholesale.ts:103-105` uses one ratio `1 - discount/subtotal` for every line.

Suggested fix: Price each returned line from its own line total and free quantity.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: 5 free (loyalty) items returned → credit 0; 5 paid items → credit equals what was paid (16.25).

MAJOR

QA-007 — Changing or resetting a staff password does not sign that person out

Fixed & verified

Users / Change password · admin · en, ar · desktop, mobile · /users

Steps to reproduce

1. Sign in as member on phone A
2. Admin resets the member's password on Users
3. Use phone A

Expected	Actual
Phone A is signed out (as the client portal already does).	Phone A stays signed in for up to 30 days. A lost phone or a fired employee keeps access until the admin deactivates the user.

Likely cause: `server/routes/users.ts:108` and `server/routes/auth.ts:120` don't delete the user's sessions (portal does: `server/routes/clients.ts:601`).

Suggested fix: Delete that user's sessions on admin reset; on self-change keep only the current session.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: admin reset signs the old phone out (401); changing your own password keeps this device and signs the others out.

MAJOR

QA-008 — Cancelling a delivered order after the cash was handed over puts the driver's box negative

Fixed & verified

Orders → Cancel / Daily close · admin, manager · en, ar · desktop · /orders

Steps to reproduce

1. Driver collects $30 on a delivery
2. Close: hand the driver's cash to the main box
3. Cancel that order

Expected	Actual
The refund comes out of the box that now holds the money (main box), dated today.	The driver's box goes to −$30 and silently eats their next day's takings (found in code).

Likely cause: `server/services/orders.ts:464` reverses into the original box on the order's date.

Suggested fix: Reverse into the main box when the driver's cash was handed over; date it today.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: delivery cash handed in, then order cancelled → refund taken from the main box, driver box stays 0.

MINOR **QA-009 — Assets page goes blank on refresh or direct link** Fixed & verified

Assets (الأصول) · admin · en, ar · desktop, mobile · /assets

Steps to reproduce

1. Open **Assets** from the menu
2. Press refresh (or reopen the installed app on that page)

Expected	Actual
The Assets page loads again.	White page, HTTP 404, no menu.

Likely cause: The page URL `/assets` is the same as the folder for the app's built files (`server/app.ts:45-47`).

Suggested fix: Rename the page route to `/fixed-assets` (and its menu link), keep a redirect from the old link inside the app.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: page moved to /fixed-assets (200); old /assets links redirect there. UI tour passes.

MINOR

QA-010 — Custom roles can see costs through the day summary and CSV export

Fixed & verified

Reports / Roles · custom role · en, ar · desktop · /reports

Steps to reproduce

1. Make a custom role with **reports: export** (or dashboard view) but no **see costs**
2. Export the orders or products CSV

Expected	Actual
No cost or margin columns.	CSV has cost and margin; `/api/reports/five` returns goods cost and profit. Default Manager and Member are NOT affected.

Likely cause: `server/routes/reports.ts:131-195` and `server/services/reports.ts:383-387` don't check `see_cost`.

Suggested fix: Drop cost columns/kinds without `see_cost`; mask the five-answers costs like `/reports/day`.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: five-answers needs see-costs (manager → 403); CSV drops cost/margin columns without see-costs; purchases, supplier debts, expenses and withdrawals exports need their own module permission.

MINOR

QA-011 — Server libraries with known security fixes available

Fixed — needs re-test

Dependencies

Steps to reproduce

1. Run `npm audit --omit=dev`

Expected	Actual
No high issues.	4 high: body-parser, compression, on-headers (fix with `npm audit fix`, no breaking change); drizzle-orm and zod need a major upgrade (low real risk here: no user-built SQL identifiers).

Suggested fix: Run `npm audit fix`, rebuild, run `npm test`. Leave drizzle/zod majors for later.

Re-test: `npm audit fix`: body-parser, compression and on-headers updated (5 → 2 advisories). drizzle-orm and zod need major upgrades: left for later, they don't apply to how the app uses them.

MINOR

QA-012 — Login has no per-IP limit and the server sends no security headers

Fixed & verified

Security (online server)

Steps to reproduce

1. Try 5 wrong passwords for `jabal`

Expected	Actual
The attacker is slowed, not the real admin.	The real admin is locked out for 60s, repeatably; one password can be tried against many usernames freely. No nosniff / frame / referrer headers.

Likely cause: `server/lib/auth.ts:110-127` locks per username in memory; `server/app.ts` adds no headers.

Suggested fix: Add per-IP rate limit on `/auth/login` and `/portal/login`; add basic security headers (helmet).

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: nosniff / frame / referrer headers present; 20 wrong logins from one address in 10 min block that address for 10 min (per-username 60s lock kept).

MINOR

QA-013 — A product photo can be an SVG file that runs script

Fixed & verified

Menu → product photo

Steps to reproduce

1. Upload an SVG with script as a product photo (needs menu create — admin only)

Expected	Actual
Only PNG/JPEG/WebP accepted.	Any `data:image/...` accepted and served from the app's own address.

Likely cause: `server/routes/menu.ts:130` and photo routes `menu.ts:278-282`, `portal.ts:201-205`.

Suggested fix: Allow png/jpeg/webp only; send `X-Content-Type-Options: nosniff`.

Re-test: Re-run in `qa/flows/retest.mjs` on a fresh server: saving an SVG product photo → 400; photo routes only serve PNG/JPEG/WebP/GIF.

MINOR

QA-014 — Sample data cannot be removed once loaded

Fixed — needs re-test

Settings → Network & cloud → Load sample data

Steps to reproduce

1. Load sample data on the live server to try things
2. Try to start fresh

Expected	Actual
A way to clear sample data before going live.	No clear/reset; sample clients, products and stock stay in reports.

Suggested fix: Either hide the button on the online server, or add **Remove sample data** (only before the first real order). Tell the client not to press it on the live server.

Re-test: Docker image sets JJS_ONLINE=1: the Load sample data card is hidden there and the server refuses it (403). Laptop copies keep it. Not run under Docker here.

MINOR

QA-015 — Orders "in fives" also applies to walk-in, staff and tasting — but not to accepted portal requests

Needs your decision

New order / Client requests

Steps to reproduce

1. New order → Walk-in → try 1 salad
2. Portal request with qty 7 → accept

Expected	Actual
Rule as the client wants it.	Walk-in, staff purchase and tasting must be 5, 10, 15…; a portal request for 7 is accepted as 7.

Likely cause: `shared/orderQty.ts` applied to every staff order; `server/services/portal.ts:75` skips the check.

Suggested fix: Ask the client which order types the fives rule is for, then apply it the same everywhere.

POLISH

QA-016 — "1 orders not delivered yet" — plural on the close screen

Fixed & verified

Daily close · /close

Suggested fix: Use singular for 1 (English).

Re-test: Close screen uses "1 order" / "2 orders" in English (4 places). Arabic was already right.

POLISH **QA-017 — CSV cells starting with = + - @ are not neutralised**

Fixed — needs re-test

Reports → CSV

Likely cause: `server/routes/reports.ts:128`

Suggested fix: Prefix such cells with an apostrophe.

Re-test: CSV text cells starting with = + - @ get a leading apostrophe; numbers stay numbers.

Checked and working

- ✓ Re-tests of every fixed finding (`qa/flows/retest.mjs` , `close-past-day.mjs` , `fx-live.mjs`) — all pass
- ✓ Browser tour of every screen (tests/ui-tour.py) and click-through flows (tests/ui-flows.py) after the fixes
- ✓ Type check, production build and all 9 API suites (smoke, full day, sync, wholesale, portal, day & route, money, manager, member, deliveries)
- ✓ First start online: admin, manager and member created from env variables; no open setup page
- ✓ All screens for Admin, Manager, Member and portal client in Arabic and English on desktop and phone — no page errors, no failed requests (except QA-009)
- ✓ Arabic is right-to-left everywhere with Arabic dates; phone layouts fit 390px with no sideways scrolling
- ✓ Member blocked from every forbidden page by URL; manager blocked from users, roles, audit, settings, costing, purchasing, people
- ✓ Portal clients only see their own orders, requests and notifications; portal and staff logins are separate
- ✓ Discounts: % capped at 100, amount can't push a total below 0, members can't give discounts
- ✓ Double deliver and double cancel are refused; quantity 0 and negatives refused
- ✓ Part payment on an invoice puts the rest on the client's account correctly
- ✓ Order, purchase and return numbers are unique; server runs on Damascus time (Dockerfile TZ)
- ✓ No secrets in the repo or the web bundle; Supabase and rate-API keys never sent to the browser or audit log
- ✓ CSV exports open in Excel with Arabic (UTF-8 BOM)
- ✓ Deep links work after refresh (except /assets); unknown API routes give a clean 404 message
- ✓ Backups restore only by exact backup name (no path tricks)

Next step: Reply with the IDs to fix (e.g. “fix QA-001, QA-003”, or “fix all blockers and majors”). Each fix

is re-tested and this report is updated.
